

Course Review: Chemistry 113

Welcome to the OG "BUET admission chemistry" part. You may remember your Udvash days — remembering every quantum concept. In this theory course, the faculties will cover **solubility, quantum mechanics, electrochemistry, thermochemistry, nanochemistry, and computational chemistry**.

The course was basically taken by three faculties during our time — **Ayesha Ma'am** conducted the quantum mechanics part along with biomolecules, **Imran Sir** conducted solubility, nanochemistry, and computational chemistry, and **Mominul Sir** (he was a guest faculty though) conducted the remaining parts.

All of those Udvash days and pop science YouTube videos you have watched will pay off during the classes of Ayesha Ma'am. I will suggest you go through the **Concept Book of Udvash** again. For this part, **Raymond Chang's Chemistry book is a good resource**. I didn't need any specific YouTube channel for this part of the course actually. **Ayesha Ma'am repeats the CT questions** (during our CT, she **didn't even change any value**) and **for TF, she loves specific topics**. **If you go through the TF questions**, you will find them out.

Imran Sir is the Head of the Chemistry Department. He has the best slides so far, and he never does any question beyond the slides. So, it is a good part — but the bad part is, you need to have **good memorization power** to accomplish the part of Imran Sir. Basically, this part is the application of chemistry. So, see the TF questions and figure out which slides to focus on for which topic.

The new part is basically Mominul Sir's part, though you are already familiar with **enthalpy, Gibbs free energy, and electrochemistry math**. But beyond that, you have to learn **phase rules, phase diagrams, how LED, LCD work, etc**. Basically, **it's the most conceptual part of the course**.

There are just a few easy and small mathematical parts in every segment. The rest is heavily theory-based, so you have to bring out your school-time "BGS" subject power. **Make sure you don't leave the paper empty**. If you know a single line about the topic or question, write it. Faculties may give you **partial marks**.

Don't forget to knock the seniors whenever you feel stuck. Best of luck for the course.
